GOING GREEN

Studies showed that the production and distribution of plastic bags significantly contributed to climate change. They block drainages and cause flooding, choke marine and land animals, and take up valuable space in waste disposal facilities where they will persist for hundreds of years. AllHome is concerned about the future where the overuse of plastics could affect the environment, so the Company decided to make moves towards the elimination of its usage.

In line with the act on banning single-use plastics in several cities here in the Philippines, AllHome partakes in this campaign by encouraging its customers to use reusable non-woven bags / eco bags in all its stores for the items that they bought from AllHome. The Company has implemented this campaign in all its stores in support of the zero-waste management movement.
